

The Unification Orb Setup Manual

A step-by-step guide to setting up your instrument
Provided by My Conscious Wellness (MYCW.ca)

What's in the Box that Just Arrived?

- A Fosi Audio MC101 Unit (Amplifier) with Bluetooth Antenna with a 24V/4.5A Power Supply
- The Unification Orb is an Icosahedron shape inside, along with a Base that is embedded with a hexagonal scalar coil to help anchor the energy
- Red & black connector cords (x2) called Banana Plugs at the end of the cords for both the Base and The Orb to go into the back of the Amplifier
- One Android Music Player (Preloaded with Frequencies to get you started)
- 3.5mm Audio Cable (for the Optional Speaker Attachment)
- USB Wall charger for the Music Player (she needs to be charged too:)
- Optional speaker not included

The Unification Orb with Icosahedron and the Base

The Music Player set with Frequencies to play

The Amplifier

Much love and gratitude from Team MYCW.ca | ph: 888 274 1134 | email:
support@mycw.ca

Step 1: Familiarize Yourself with the Components

- Power Supply (Black Box) that powers the amplifier. Do not plug it into the wall just yet.
- Bluetooth Antenna: Attach to the back of the amplifier. Tighten gently.
- The Unification Orb and Base: An Icosahedron 20 coils instrument long with a hexagonal coil-base with banana plug cables that will be connected to the FOSI amp (see below for more about that).
- Android Music Player: Comes preloaded with a playlist and VLC media player.

Step 2: Connect the Unification Orb and Base to the back of the Amplifier

- Insert the banana plugs at the end of the Base AND the Unification Orb vertically into the speaker output ports in either the Left or Right Channel in the back of the FOSI amplifier.
- The orientation matters more than color matching; just keep the red and black vertically aligned.
- Either the base or the Orb can be connected to the left or right side.

Step 3: Plug In the Power Supply to the Amp and the wall to get us moving

- Insert the power cable into the DC input on the back of the amplifier.
- Plug the power supply into the wall.
- Flip the Power/Input Selection Switch to BT (Bluetooth) on the front of the amp next to the large gold button

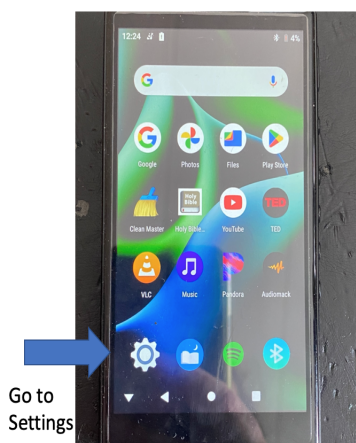

Step 4: Power On the Music Player and Connect via Bluetooth

- Turn on the Android music player using the black button (the large flat button on the side of the player)
- Wait for the blue light on the amplifier to become solid. If it is flashing, pairing is not complete.
- Access Bluetooth settings (via the cogwheel icon) and pair it with Fosi Audio (if required).
- Avoid using Wi-Fi—this instrument does not require or benefit from internet access.

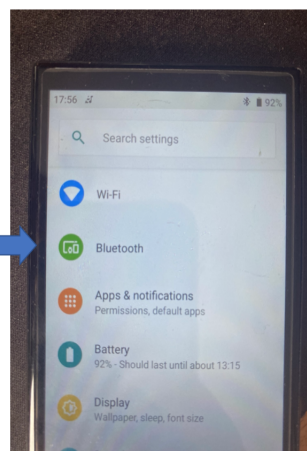

Switch is set to BT for Bluetooth

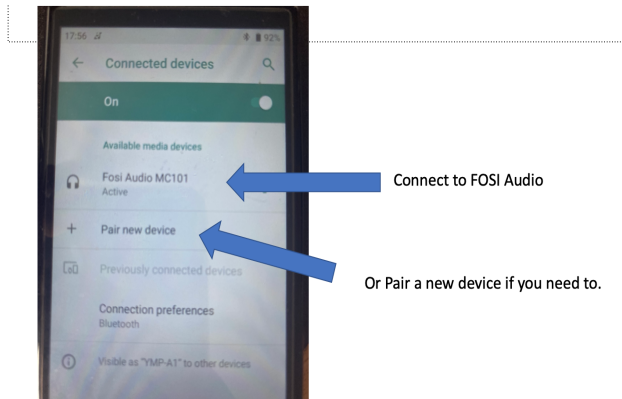

The Blue light should be solid if paired. If it is flashing go To setting on the player and pair the player to the FOSI amp.

Go to
Settings

Inside Setting
go to Bluetooth

Step 5: Adjust the Amplifier Settings and Calibrate your Instrument

- Bass & Treble Knobs: Set to 12 o'clock.
- Gold Volume Knob: Set to 3 o'clock for initial calibration.
- Music Player Volume: Use side buttons to set to maximum.
- VU Meter: Will remain still until audio is playing.

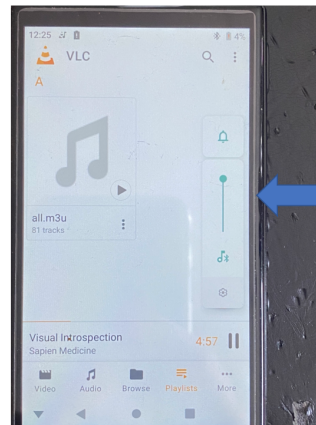

What does she look like from the front?

Power button to get the player started

Press the plus button to turn the volume up to 100% on the player

This line pops up when you press the + Button on the left to show you the volume is set to 100%

Step 6: Calibrate Using VLC Media Player

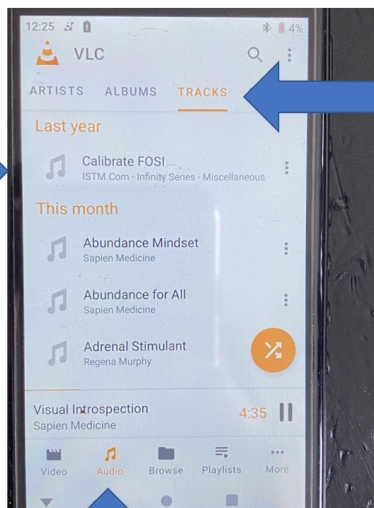

- Open VLC Media Player (ignore the built-in Music folder).
- Play the track titled 'Calibrate Fosi Frequency'.
- Observe the VU Meter needle — adjust the gold knob slightly until the needle hits zero.
- This becomes your instrument's sweet spot. Keep the gold knob fixed here unless recalibrating is needed. .

VLC Media player has all the preloaded frequencies to get started

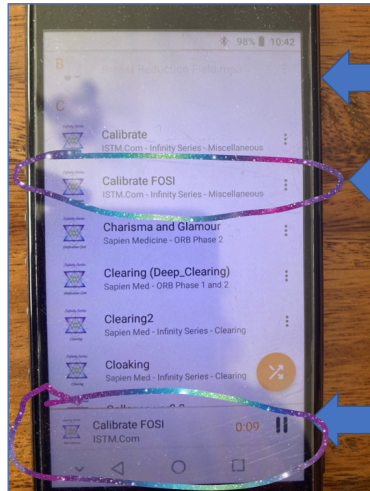

NOT THIS!

Find the track called Calibrate FOSI

If you touch here you can list them by albums or tracks

This is where are all the audios are located

Step 1: Make sure the volume on the player is all the way up

Step 2: Find the Calibrate FOSI Track. Typically located in the audio section of VLC under Tracks and press it PLAY to it started

Step 3: See the track is playing below, the counter in counting..

Step 4: Calibrate by turning the gold knob up to until....

.... the needle on the meter is at the Zero, Right where it goes from Black to red☺

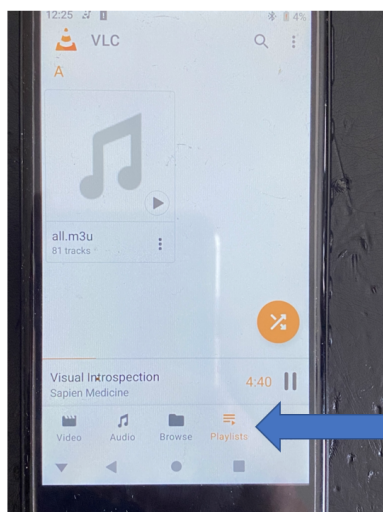

NOW we are good to go.

You should only need to do this once!

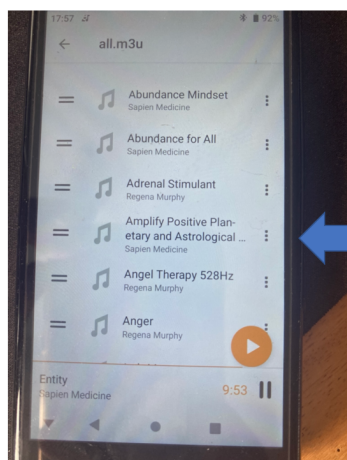

Much love and gratitude from Team MYCW.ca | ph: 888 274 1134 | email: support@mycw.ca

Step 7: Play Your Frequencies to Get the Energy Moving

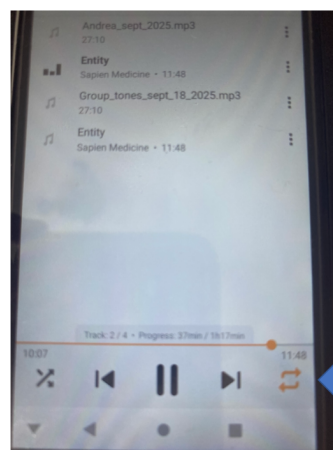

- Navigate to the Playlist section
- We recommend you start with Clearing to help dust of the environment and then go to Phase 1 in the playlist section to start. But if you sense something else, trust your instincts.
- Meanwhile we have provided you with a manual that lists all of the frequencies. We suggest you begin to get to know them over time so you can choose the ones that call you.
- Choose any frequency and press play.
- Ensure the loop icon (two arrows in a circle) is orange for continuous 24/7 play.
- The VU Meter and blue light will pulse, showing the instrument is working.

We set up a playlist to start. Open the playlist, pick a frequency and get the energy started

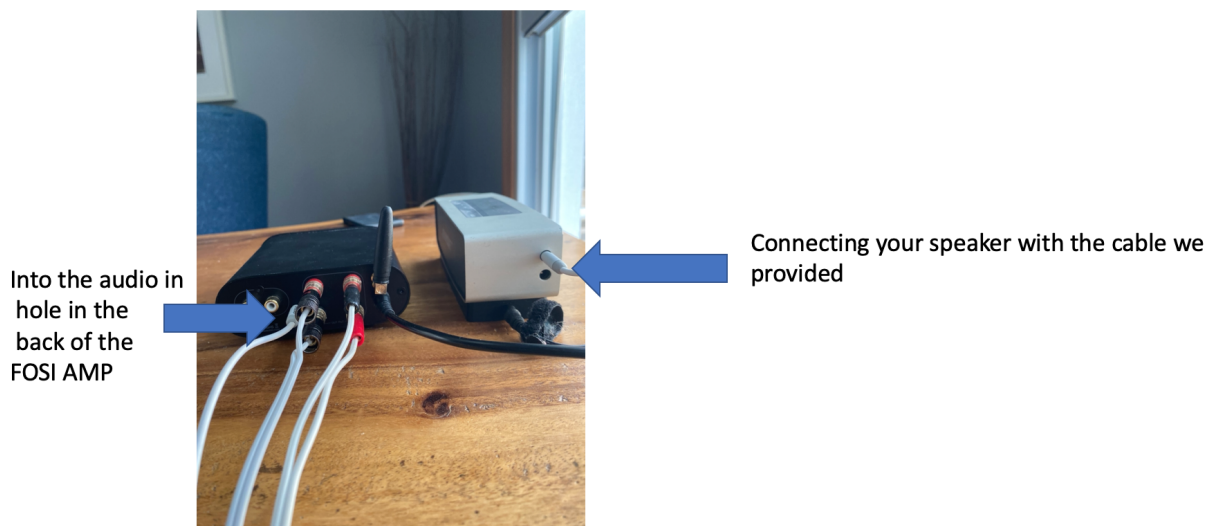

Pick a frequency

Means PLAY ALL

Step 8: Optional — Connect a Speaker

- Use the included 3.5mm Audio Cable to connect the Audio Out on the amplifier to any speaker. You cannot use Bluetooth.
- Volume must be controlled on the speaker only. Do not adjust the amplifier or player volume once calibrated.
- Speakers are optional but encouraged. Hearing the sound helps your body and consciousness connect more deeply.

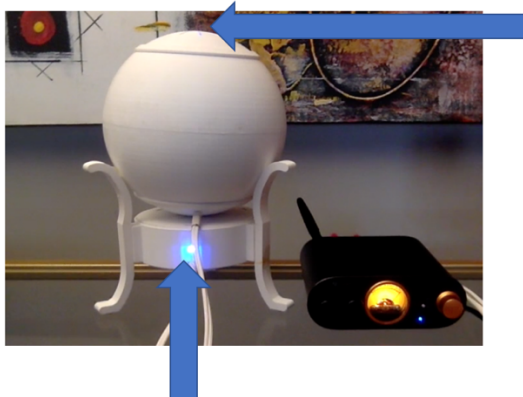

Understanding the Front Panel (Amplifier Overview)

- Bass Knob – Fine-tune low frequencies.
- Treble Knob – Fine-tune high frequencies.
- VU Meter – Indicates audio output (energy delivery).
- Indicator Light – Lights when power is on.
- Input Selector – Use BT (Bluetooth) for wireless music player connection.
- Gold Volume Knob – Controls energy delivery intensity. Once calibrated, typically at the 3 o'clock position. If you set this too high, you will burn out your FOSI AMP.

Troubleshooting Tips

- No Blue Light on the back of the instrument? Needle Not Moving?
 - Make sure a frequency is playing and the player volume is maxed.
 - Still unsure? Check the Entity Clearing Track
 - Check that a frequency is actually playing on the music player (the counter is counting😊)
 - Could be a silence track so give it a moment😊
- Blue Light Flashing on the FOSI AMP?
 - Reconnect to the Fosi Audio AMP via Bluetooth settings in the Music player.
- Only One Frequency Repeats? Tap the loop icon in VLC until it shows orange arrows so will play all instead of just one.

On the base it is just above where the cord goes in

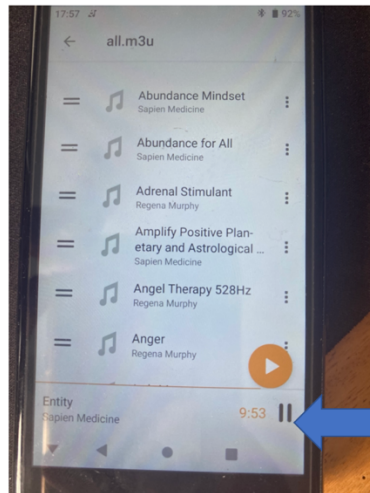

There are two Blue LED lights one on the top of the Orb and one on the base

****Depending on which frequency is playing the lights dance a little or a lot and sometimes not at all.

Entity Clearing makes that blue light dance like crazy. So you can always check with that frequency.

If it does not check your set up steps and then reach out to support@mycw.ca for help.

This Meter bounces up and down when the frequencies are playing, that's one of the ways you KNOW she is working ☺

When a frequency is playing the counter is counting

Helpful Reminders

- Your instrument is working even if the needle or light appears still — some frequencies are less visually active, but overall you should see both moving. This is what shows you the energy is moving.
- This is an energy device — you don't have to hear it to receive the effects. But hearing it helps the brain remember that something is going on. Try a speaker as often as you can.
- Remember this is an energy, a consciousness, connect to it often rather than ignoring it. Place it on your body, under your pillow, use it during meditation, or even while connecting while working and talking with others. Some even name their instruments. Remember it a consciousness it too wants to connect to you.
- This tool was not meant to be put on a shelf like a toy. It is an energy meant to be played with, received, and embodied like love.
- Frequencies will continue playing unless stopped manually. They are designed to run 24/7 if you choose. You can always press pause on the player if you want a break.
- We encourage you to create custom playlists within VLC to suit your energetic focus. Pick tracks that call to you and create your own custom lists to get you moving.

Final Calibration Checklist

- ☒ Android Player Bluetooth ON and connected to Fosi Audio
- ☒ VLC Media Player installed and opened
- ☒ Calibration track used to set Gold Knob
- ☒ Volume on Android Music Player set to MAX
- ☒ Bass & Treble at 12 o'clock
- ☒ Solid Blue Light is visible specifically when playing Entity Clearing
- ☒ VU Meter needle bouncing during playback while frequencies are playing
